## Making your World a Safer Place

Welcome to eGuard Solutions Ltd, we offer a unique combination of solutions to meet our client's need.

We plan, design and install complex innovative large/small scale electronic security solutions and integrated process automation systems for a diverse range of public-sector and private clients across Africa.

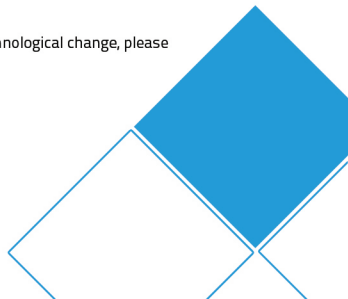

We treat each of our clients differently; hence offer bespoke solutions to meet their needs. We are affiliated with many foreign suppliers, which enable us to choose from a range of products, giving us the independence; it is this independence that defines us: Our impartiality, our willingness to share risk, our independent status and our independent point of view.

Our business serves major enterprise markets, offering scalability, reliability and in-depth technical capability underpinned by extensive practical experience and outstanding results.

For all security needs and challenges, from new-builds to system redesign, we can demonstrate a track record of winning partnerships, providing the resources and know-how that successfully deliver on-time, on-budget, and on-target security solutions which consistently realises expectations.

To find out how we can help improve the security in your home or Business in this world of rapid technological change, please contact us to have a consultation or visit us at [www.eguardolutions.com](http://www.eguardolutions.com)

Adewale Oluwa BSc, MSc, MIET, MAPM (UK).  
Managing Director

## ABOUT US

---

We are an independent indigenous company owned by Nigerians. We specialises in the design, supply, installation and total support of complex electronic security and safety systems for a diverse range of public and private client across Africa.

The combination of a wide ranging experience and the deep in-house technical knowledge coupled with our professionalism & responsive approach have resulted in a new and refreshing solution for many of our clients here in Africa.

We design innovative, integrated, automated and security solutions for every type of business and individual. We employs highly-capable specialist, covering all relevant engineering disciplines, to provide customised systems to meet each client's unique requirements. The contracts we undertake cover a broad sweep of electronic security solutions from access control and CCTV to security and fire systems, and from cable management systems to information and telecommunication systems.

We place great emphasis on understanding our customer's needs and work in close partnership with them from the initial conception through to design, installation, and system handover. We pride ourselves in providing bespoke solution tailored to meet our customer's need.

With our vast experience within the Telecommunication and Security industry, together with affiliations with a number of reputable foreign suppliers, eGuard Solutions has the reach and means to deliver high quality products and services at a very competitive cost, delivered on time to our clients.

Just imagine it and be assured we will make it happen.

## VISION

*'To be a Leader in the provisioning of electronic security and automation systems in Africa'*

## MISSION

*'Exceeding customer expectation through delivering innovative and unique security solutions using technological approach'*

## Our Services

In a world where new threats can suddenly emerge from unexpected directions, security is something no individual or organisation can take for granted. Those threats need to be anticipated and planned for.

We provide a full range of security products and services to help our customer benefit from a safe working environment, secure property and protect assets.

Some of our service includes:

- Monitored Intruder & Panic Attack Alarms
- Access Control System
- IP CCTV Systems
- Video Camera CCTV Systems
- Fire Detection & Alarm System
- Home Automation System
- Service and Maintenance

## Monitor Intruder & Panic Attack Alarms

eGuard Solutions have a full comprehensive range of Intruder / Security System products to choose from which is able to fulfil all the requirements, from the smallest to the largest installation, we use the latest technology to protect your possessions which can be tailored to suit your specific needs.

Our range of GSM burglar alarms allows you to monitor and control the alarm by SMS text message. Our superb burglar alarms can be fully armed if you are out, partly armed if you are in and set to exterior mode offering full security to the perimeter of your property. Our exceptional home burglar alarms not only notify you of an intruder but can also prevent a break in with an external siren that will sound before the threat has reached your home.

Our security systems are ideal for homes and businesses. All our security systems have our unique guaranteed against false alarms. Reliable wireless installation makes our systems fast, effective and flexible. Additional movement detectors can be added to suit your property requirements.

Below are some ranges of products we offer to our clients:

- GSM alarm Systems.
- Professional Grade Burglar Alarm
- Lone worker Alarms, GSM Diallers, CCTV Security lighting, Panic alarms

Contact us for more information on a broad range of solutions for your intruder alarms system.

## Access control

Access control is now an accepted part of business and communal accommodation operations. It protects both personal and physical assets by allowing access to those people who are authorized and restricting access to those who are not.

eGuard Solutions offers control and visitor management systems intended to control access for employees, contractors and visitors to sites of all sizes and in all environments.

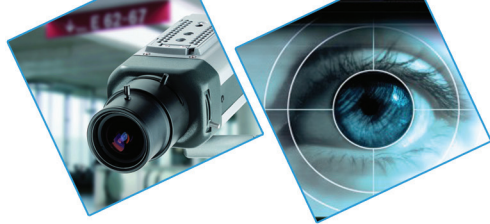

The system utilises multiple technologies such as swipe cards, proximity tokens, PIN entry keypads and sophisticated biometric devices. The systems can be designed around existing hardware to provide an effective solution for a single site, or multiple sites across an estate. PC based systems are amongst the most flexible, allowing the system administrator to add strict access restrictions to ensure that only authorised individuals/personnel can enter areas at particular times of the day. The system will also allow administrator to view when a card holder arrives and leaves site, what areas of a building they have accessed and at what times, and where an attempt is made by a card holder to access a restricted area.

Connections to alarm devices such as visual, audible or remote alarms can also be triggered when a door is forced.

We have experience in the design and installation of all these systems.

Some key components of these systems include:

- Door Controller
- Proximity & Swipe Card Reader
- Photo Identification
- Pin Entry Keypads
- Barriers & Turnstiles
- Biometric Devices
- Automatic Door Closer
- Request to Exit & Breakglass Switches
- Audio & Video Entry Systems

## IP CCTV Systems

IP based cameras are the future. They work by turning images and audio into data which can then be transmitted over a network or Internet connection to a central location or PC located anywhere in the world or to any internet enable device like an android phone, Ipad or Iphone.

Digital technology means superior high definition images that do not degrade on playback, recording or onward forwarding, and gives the modern day Security Manager greater flexibility to view and manage CCTV images. An IP CCTV system provides real benefits over traditional analogue CCTV technology.

eGuard Solution have access to a full comprehensive range of IP based network video security products and accessories, offering the latest in high quality megapixel (MP) and network based video surveillance solutions technology, to suit the widest possible range of applications and client requirements.

Contact us to discuss any of your IP CCTV needs or for a FREE no obligation security survey of your premises.

## Closed Circuits Television Systems

eGuard Solution CCTV Systems provide an effective crime deterrent, utilising the latest digital technology to monitor access to secure areas, unauthorised activities, theft or criminal damage and personal safety or even provide a remote response to an intrusion. The choice of CCTV systems that we can offer is very extensive, ranging from simple single-camera installations to large fully integrated systems.

With everything that today's technology has to offer the applications for CCTV are almost limitless. No matter what the size or complexity, eGuard Solutions will design a system, which can be tailored to meet the requirements of each individual customer.

## Fire Detection and Alarm Systems

We offer complete solution to fire safety.

With one company looking after all of your fire needs, we can work with you to ensure a risk assessment led process to provide you with optimum fire safety, with no gaps, or overlaps. When considering your fire safety strategy, you should aim to prevent fire, detect fire, contain fire and have plans to escape fire.

## Service and Maintenance

**eGuard Solutions** offers structured service plans to maintain security installations that was commissioned by us. We maintain a service replacement stock of over 90% of the components that make up a security system. Many of these items include expensive digital video recorders and computers.

A Full-Service eGuard Solutions Maintenance Agreement includes all parts and labour, free training upon request and quarterly written inspections, as well as preventative maintenance on all system components.

## Home Automation System

Our expertise across all types of electronic security means that we are able to integrate CCTV with other security systems such as intruder alarm, access control and fire alarm systems.

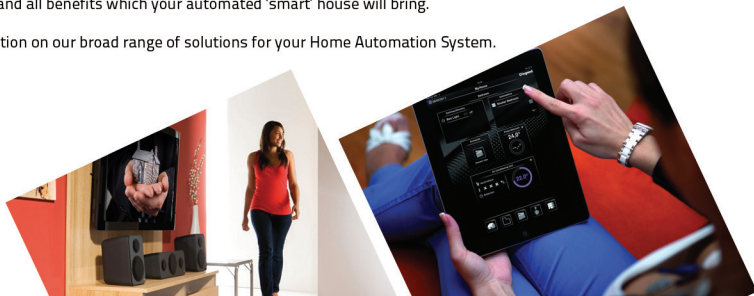

Home Automation provides the added comfort, convenience, enhances your security and produces environmental savings in all your home systems which you automate. This can control all aspects of your life but with you in total control of how much.

With our background in electrical and cabling we are able to understand the total need that Home Automation systems should never be seen but should work seamlessly in the background.

All our Home Automation packages are designed to integrate together and will work today - but more importantly are designed for expansion tomorrow.

Now is the time to take advantage of this 21st century home automation technology to provide you with the latest time saving devices, security protection and all benefits which your automated 'smart' house will bring.

Contact us for more information on our broad range of solutions for your Home Automation System.
